

Database Management System Model Paper

SLIM-IT

1. The Data in the database at a particular moment is called _____

- (a) Occurrences or instances
- (b) Database state or snap shot.
- (c) Both (a) and (b)
- (d) None of the above

2. The management of data involves

- (a) Definition of structure
- (b) Information
- (c) Both (a) and (b)
- (d) None of the above

3. The management of data in a database system is done by means of general purpose software packages such as

- (a) FoxPro
- (b) Oracle
- (c) Ingress
- (d) All of the above

4. With the help of data can be retrieved collectively or selectively.

- (a) DBMS
- (b) DML
- (c) DDL
- (d) None of the above

5. DBMS provides a facility to access data anywhere in the database without the knowledge of..... data are actually organised.

- (a) When
- (b) How
- (c) Why
- (d) None of the above

6. A database is a collection of related data, by data we mean that can be recorded and that have implicit meaning.

- (a) Known facts

- (b) Unknown facts
- (c) Both (a) and (b)
- (d) None of the above

7. The process of a database involves specifying data types, structure and constraints for the data to be stored in a database.

- (a) Constructing
- (b) Defining
- (c) Making
- (d) None of the above

8. DBMS is a general purpose software that facilitates the processes of databases for various application.

- (a) Defining, constructing
- (b) Manipulating
- (c) Both (a) and (b)
- (d) Only defining

9. The collection of information stored in a database at a particular moment is:

- (a) View
- (b) Schema
- (c) Instance
- (d) None of the above

10. The overall design of a database is called:

- (a) Database schema
- (b) Database screen
- (c) Both (a) and (b)
- (d) None of the above
